Adding the Turning Technologies Registration Tool to Your Course

In order for students to register their clickers and ResponseWare device IDs, you’ll need to add the Turning Technologies Registration Tool to your course. We recommend creating a separate folder for TurningPoint information in your course content. Include this tool link in it so TurningPoint can connect responses from devices to your students’ names for grading and attendance.

1. Add the tool in your Course Content folder using the Tools menu.

Best Practice

Create a folder in your Course Content to contain the TurningPoint Registration Tool, as well as helpful guides for your students.

Notify students about registering devices and publicize policies regarding deadlines for registration, and students' proper course of action if grades are not appearing in Blackboard from clicker/device use.
